

Mateusz Kołodziejczyk

Founding Engineer · Product Engineer · AI Agents

mateusz.j.kolodziejczyk@gmail.com · Wrocław, Poland · remote · [linkedin.com/in/mateusz-kołodziejczyk](#) · [github.com/MatEE404](#)

Founding and product engineer with five years of commercial experience building AI products end to end — from product decisions and UX, through agent systems and full-stack code, to cloud, security and compliance. At EA Global AI I built and own the AI executive-assistant platform that enterprise customers run on, and took it technically through ISO/IEC 27001 certification.

5 years of commercial experience building AI products	ISO 27001 Led 100% of the technical work for certification	Enterprise The platform I built runs at Metlen, Solactive, Çalık Enerji & CapMan

EXPERIENCE

EA Global AI Founding Engineer	Remote · UK-based Jul 2022 – Present
- Built the AI executive-assistant platform from scratch and own its entire technology — product, agent harness, Autofill, connectors, full-stack application and cloud — delivered to enterprise customers including Metlen, Solactive, Çalık Enerji and CapMan. - Designed the agent harness from zero: memory, storage, knowledge base and retrieval (RAG), browser use, code execution and remote access to computers; implemented MCP and the Agent Skills standard. - Connected agents to 3,000+ apps via Pipedream alongside native connectors, and shipped the clients around the platform: a Chrome extension, a Rust + Tauri desktop app and a native Swift app. - Published customer results of the platform: RFP responses in half a day instead of two, and an EcoVadis assessment reviewed in 108 minutes instead of three weeks of team effort. - Led 100% of the technical implementation for ISO/IEC 27001 certification (2026) and co-authored part of the security policies. - Shape the product from customer feedback: decide what to build, design the experience and ship it to production. - Run production on AWS, Google Cloud, Azure, Cloudflare and RunPod — Terraform (IaC), CI/CD on Blacksmith, self-hosted AI models, reliability, security and scalability.	

EthicsGrade Software Developer	Remote · UK-based Apr 2022 – Jun 2022
- Built AI prototypes from concept to implementation in the core technical team, covering application logic and the user interface.	

SKILLS

Specialization	Agentic AI systems · AI platform & harness engineering · Product engineering · Agent orchestration, MCP, RAG & context engineering · Evals, observability & guardrails · Distributed & full-stack systems · Cloud infrastructure, DevOps & security
AI & agents	OpenAI SDK · LangChain · MCP · Agent Skills · RAG · Pipedream · self-hosted models · AI-native development with coding agents
Engineering	Python · TypeScript · Rust · Swift · React · Vue.js · FastAPI · Django · Tauri · Chrome extensions · Celery · Redis · SQL · Stripe · Auth0
Cloud & DevOps	AWS · Google Cloud · Azure · Cloudflare · RunPod · Docker · Kubernetes · Terraform · CI/CD (Blacksmith)
Languages	Polish (native) · English (professional)

EDUCATION

Computer Science	WSB Merito University, Wrocław — completed the first year (2024–2025), then chose to focus full-time on building products
IT Technician	Technik informatyk — upper-secondary vocational diploma with certified state qualifications

Beyond work: Runner — 3,700+ km and 392 runs on Strava (half marathon 1:41:14) · Traveler — 22 countries and territories
